The Sunday Star

WASHINGTON, D. C.

Gravure Section
November 3, 1946

The 19-foot bronze statue of Thomas Jefferson which will stand in his memorial at the Tidal Basin is taking shape in a New York foundry. Here Dominic Scoma is shellacking the plaster head preparatory to casting.

Because of the great amount of detail involved a wax casting process is used on a head, while sand molds are used on other portions of a statue. For other pictures of the foundry work see pages 8 and 9.
